Getting Started: Technology

Opening links

- Open the links in Chrome, Firefox, or Safari browsers.
- You may need to allow the following domains in your security settings, sometimes referred to as “whitelisting”:

https://recontent-1bca.kxcdn.com/
https://rippleeffectsweb.com
https://redatamanager.com
https://rippleeffectskit.com

Getting programs to users

- Specify to your tech person which student apps you want on which devices. Make sure that the devices students are using get the links to the student apps. Your technologist can "push" these down to devices.
- On Chromebooks, Windows computers, or Android tablets you can create a desktop shortcut or pin the Dashboard to the taskbar.
- You can also add browser bookmarks directly for each student app. You can find, copy and paste each app URL from below its icon on the Educator Dashboard's "Programs" page.
- You can embed the URLs in a district or school web page.
- Educators may want to bookmark their browsers with the Dashboard link (URL). That link is also on Ripple Effects' website home page.

Cloud/Network

- The program contents and user records are hosted on Cloud servers. You must have broadband Internet access to run the apps. Security settings must allow downloading and uploading data to these servers. Make sure that downloading of larger media files for audio and video is allowed. Content filters should not block Ripple Effects.
